### Salina Parks & Recreation Special Populations (overnight) Travel Program Medical Profile/ Medication Information

In order to ensure a safe travel experience, Salina Parks and Recreation has implemented rules and regulations regarding overnight travel with the Special Populations program.

Prior to attending a trip, each participant must fill out/update a participant information and medical history form. This form consists of general participant information, emergency contact information, and the participant's disability. Each participant must also submit a medical history profile from their doctor's office (if taking any prescription medication/over-the-counter medication/vitamins/etc). This profile should contain information on the participant such as diagnoses, current medication, dosages, etc.

Deadlines for submitting this information will be listed in each trip flier.

A nurse/employee with certification will be administering all medication to each participant for the duration of the trip with the Special Populations program. Participants must bring their medication in their original bottles and put all of the bottles in a Ziploc bag; please do not put the pills in daily pill containers. This bag will be handed over to our nurse when the participant is picked up for the trip. If a participant brings any medication that is not listed on the medical profile, they will not be permitted to take it.

Please make sure the medical profile is as current as possible.

Medication includes:

- anything prescribed by a doctor
- vitamins, dietary supplements
- over the counter (Tylenol, Ibuprofen, etc)

If you have any further questions regarding these matters, please contact the Special Populations Supervisor at (785) 309-5765.
